terra

Backend Developer

Building scalable backend systems that power real-world applications is what drives me. Having developed full-stack projects like 'El Grano de Oro'—which integrates AI-driven recommendations and automated email systems—I have gained hands-on experience in designing robust architectures that bridge the gap between complex data and user-facing interfaces. My technical foundation in PHP, JavaScript, and database management with MySQL and PostgreSQL aligns perfectly with the requirements of your team at Terra.

Beyond just writing code, I am passionate about creating maintainable, efficient solutions. Whether it is optimizing database performance or integrating RESTful APIs, I enjoy the challenge of troubleshooting and refining systems to ensure they perform flawlessly under pressure. My background in Engineering and my current studies in Multiplatform Application Development have instilled in me a disciplined approach to software architecture and a constant desire to stay ahead of industry trends.

I am particularly drawn to Terra's innovative, tech-forward culture and the emphasis on collaborative growth. I am eager to bring my problem-solving skills and my experience with modern frameworks like React, Vue, and Astro to your development team. I would welcome the opportunity to discuss how my technical background and proactive mindset can contribute to the ambitious digital projects you are delivering for your clients. Are you available for a brief call next week to explore how I can add value to your backend operations?

Atentamente,

Jorge Jaime Sena
