hackajob

Junior Software Engineer

Building software that solves real-world problems is what drives me every day. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and C. I thrive on the challenge of turning complex requirements into clean, functional code, and I am eager to bring this proactive mindset to the engineering team at hackajob. My technical foundation in JavaScript, SQL, and Docker allows me to handle the full development lifecycle, ensuring that the solutions I build are not only performant but also scalable and production-ready. Beyond the code, I am a fast learner who enjoys collaborating in international environments, supported by my C1 English proficiency. I have been following hackajob's impact on the tech recruitment space, and I am convinced that my blend of academic rigor in Industrial Engineering and hands-on development experience makes me a strong fit for your Junior Software Engineer role. I would welcome the opportunity to discuss how my technical skills and passion for automation can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
