SIONIQ - JOS

Full Stack Developer (Fresher)

Building software that solves real-world problems is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro' to creating desktop tools, always focusing on clean architecture and functional deployment. I am particularly drawn to SIONIQ because of your commitment to innovative development, and I am confident that my technical background aligns perfectly with your team's needs.

Throughout my projects, I have leveraged JavaScript and Java to build robust backends, while utilizing SQL for efficient data management. My workflow is deeply integrated with Git for version control and Docker for containerization, ensuring that the applications I build are scalable and production-ready. I thrive in environments where I can combine my technical skills with a proactive approach to problem-solving.

I am eager to bring my passion for full-stack development and my ability to learn new technologies rapidly to your team. I would welcome the opportunity to discuss how my background in building end-to-end solutions can contribute to the ongoing success of SIONIQ. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
