Interco

Junior Software Developer

Building software that solves real-world problems is what drives me every day. My experience developing full-stack applications, such as 'El Grano de Oro', has allowed me to bridge the gap between complex user needs and technical implementation. By integrating AI models like Gemini into production environments, I have learned how to create scalable features that provide genuine value to end-users, rather than just writing code for the sake of it. My background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a rigorous approach to problem-solving and system architecture. I am particularly drawn to Interco because of your commitment to innovation and high-quality software standards. I am confident that my proficiency in JavaScript, Java, and Docker, combined with my ability to work in international environments with my C1 English level, will allow me to contribute effectively to your development team from day one. I would love to discuss how my hands-on experience with web and desktop automation can support the upcoming projects at Interco. Are you available for a brief call next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
