METRICA

Desarrollador Fullstack Junior

Building functional, user-centric applications is what drives me, and I have spent the last few years turning that passion into production-ready software. My technical foundation in JavaScript, Java, and SQL has allowed me to develop everything from dynamic e-commerce platforms with AI integration to complex desktop utilities. I am particularly proud of my work on 'El Grano de Oro,' where I managed the full stack lifecycle, ensuring a seamless user experience while implementing automated backend processes. My approach combines the analytical mindset of an Engineering student with the practical agility of a self-taught developer. I thrive in environments where I can solve complex problems and contribute to scalable codebases from day one. I am confident that my hands-on experience with Git and modern web technologies aligns perfectly with the development standards at METRICA. I would welcome the opportunity to discuss how my technical background and proactive problem-solving skills can support your team's upcoming projects. Are you available for a brief conversation next week to explore how I can contribute to your development goals?

Atentamente,

Jorge Jaime Sena
