Open Core Holdings LLC

Junior Software Developer

Building software that bridges the gap between complex logic and user-centric design is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to go beyond standard web development by integrating AI models like Gemini to create personalized shopping experiences, while managing full-stack architecture from database to deployment. I thrive on solving technical challenges, whether it is optimizing music library synchronization in my desktop applications or building scalable web solutions for real-world businesses. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and system architecture. I am particularly drawn to Open Core Holdings LLC because of your commitment to robust, scalable software solutions. I am eager to bring my proficiency in JavaScript, Java, and Docker to your development team, contributing to projects that require both technical precision and creative innovation. I would welcome the opportunity to discuss how my hands-on experience with production-ready applications can add immediate value to your team. Are you available for a brief conversation next week to explore how my skills align with your current development goals?

Atentamente,

Jorge Jaime Sena
