## Reef

Full Stack Web Developer (Front End Focused)

Building functional, user-centric web applications is what drives me. My recent work on projects like 'El Grano de Oro' allowed me to bridge the gap between complex backend logic and intuitive frontend design, utilizing JavaScript, HTML, and CSS to create seamless shopping experiences. I am particularly drawn to this role at Reef because of your focus on high-quality web interfaces, and I am eager to bring my technical background in SQL and full-stack development to your team. Beyond just writing code, I thrive on solving real-world problems, whether it is integrating AI-driven features or optimizing database interactions for better performance. My experience in deploying production-ready applications has taught me the importance of clean, maintainable code and the value of a user-first approach. I am confident that my proactive mindset and technical versatility will allow me to contribute effectively to your ongoing projects from day one. I would welcome the opportunity to discuss how my skills in JavaScript and modern web development align with the goals of your engineering team. Are you available for a brief conversation next week to explore this further?

Atentamente,

**Jorge Jaime Sena**
