Nourish Care

Junior Software Engineer

Building software that solves real-world problems is what drives me. My recent work on 'El Grano de Oro' allowed me to bridge the gap between e-commerce and artificial intelligence, implementing a custom virtual assistant using Gemini to enhance user experience. This project, alongside my desktop application 'Music Downloader Pro', demonstrates my ability to handle full-stack development, from database management to intuitive UI design. I am particularly drawn to Nourish Care because of your commitment to improving lives through technology, and I am eager to apply my technical background in JavaScript, Java, and SQL to your engineering team. My academic foundation in Industrial Engineering and Multiplatform Application Development has instilled in me a rigorous approach to problem-solving and system architecture. Beyond my technical skills, I bring a proactive mindset and the ability to thrive in international environments, supported by my C1 English proficiency. I am confident that my hands-on experience in deploying production-ready applications makes me a strong fit for your team. I would welcome the opportunity to discuss how my passion for automation and software development can contribute to the continued success of Nourish Care. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
