Omnisalud

Analista de desarrollo de Software Junior/ Medellín

Building software that solves real-world problems is what drives me, and I have been following Omnisalud's impact on the healthcare sector with great interest. My background in full-stack development, combined with a hands-on approach to deploying production-ready applications, aligns perfectly with the challenges your team faces in Medellín. In my recent projects, such as 'El Grano de Oro', I successfully integrated AI models like Gemini to enhance user experience and automate complex workflows, demonstrating my ability to bridge the gap between technical implementation and business needs. Beyond web development, my experience with Java, JavaScript, and Docker allows me to build scalable, robust solutions. I am particularly drawn to this Junior Software Analyst role because it offers the opportunity to apply my analytical mindset to healthcare technology, ensuring that software not only functions correctly but also provides tangible value to users. I am a fast learner who thrives in collaborative environments and I am eager to bring my technical versatility to your team. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration can contribute to the continued success of Omnisalud. Are you available for a brief conversation next week to explore how I can add value to your development projects?

Atentamente,

Jorge Jaime Sena
