Inceptionway

SOFTWARE ENGINEER - FRESHER

Building software that solves real-world problems is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my e-commerce platform for 'El Grano de Oro,' where I integrated AI-driven recommendations and a virtual assistant to enhance user experience. I thrive on the challenge of full-stack development, leveraging JavaScript, Java, and SQL to create robust applications that go beyond simple code. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and system architecture. I am particularly excited about the opportunity at Inceptionway because of your commitment to innovation and high-quality engineering. I am confident that my hands-on experience with Docker, Git, and AI integration, paired with my C1 English proficiency, will allow me to contribute effectively to your team from day one. I would love to discuss how my technical skills and proactive mindset can support your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to the Inceptionway team?

Atentamente,

Jorge Jaime Sena
