Haystack

Junior Software Engineer

Building software that solves real-world problems is what drives me. My recent work on 'El Grano de Oro' allowed me to bridge the gap between full-stack web development and artificial intelligence, implementing a custom AI assistant using Gemini to enhance user experience. This project, along with my desktop application 'Music Downloader Pro', demonstrates my ability to take a concept from initial code to a fully deployed production environment. I am particularly drawn to Haystack because of your commitment to innovative engineering solutions. My background in both Software Development and Industrial Engineering has equipped me with a unique analytical mindset, allowing me to tackle complex technical challenges with efficiency and precision. I am highly proficient in JavaScript, Java, and SQL, and I am eager to apply my skills in Docker and Git to contribute to your team's ongoing projects. I am confident that my proactive approach to learning and my hands-on experience with production-ready applications make me a strong fit for the Junior Software Engineer role. I would welcome the opportunity to discuss how my technical background and passion for automation can add value to Haystack. Are you available for a brief call next week to explore how I can contribute to your engineering team?

Atentamente,

Jorge Jaime Sena
