Infinite Computer Solutions

Junior Software Engineer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My recent work on 'El Grano de Oro' allowed me to implement AI-driven recommendation systems and automated email notifications, proving that I can take a project from concept to a fully deployed production environment. I thrive on solving technical challenges, whether it is optimizing desktop applications like my Music Downloader or architecting responsive web solutions for businesses.

My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has given me a unique perspective on system architecture and efficiency. I am highly proficient in JavaScript, Java, and SQL, and I am comfortable working with tools like Docker to streamline development workflows. I am particularly drawn to Infinite Computer Solutions because of your commitment to innovative software engineering, and I am eager to bring my hands-on experience with AI integration and full-stack development to your team.

I am confident that my proactive approach to learning and my ability to deliver functional, high-quality code will make me a valuable asset to your engineering department. I would welcome the opportunity to discuss how my technical skills and passion for automation align with the goals of your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
