IVCISA

Desarrollador Junior - Panamá

Building software that bridges the gap between complex logic and user-centric design is what drives my daily work. Having developed full-stack applications like 'El Grano de Oro', where I integrated AI-driven recommendation engines and virtual assistants, I have gained hands-on experience in delivering production-ready solutions. My technical foundation in JavaScript, Java, and SQL, combined with my ability to deploy scalable web and desktop tools, aligns perfectly with the innovative projects at IVCISA. Beyond the code, my background in Industrial Engineering and my C1 English proficiency allow me to approach technical challenges with a structured, analytical mindset while collaborating effectively in international environments. I am particularly drawn to the opportunity at IVCISA because of your commitment to high-quality software development in the Panamanian market. I am eager to bring my proactive approach to problem-solving and my experience with AI integration to your development team. I would welcome the chance to discuss how my technical skills and passion for building efficient, user-focused applications can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
