Randstad Argentina

Junior Web Application Developer

Building functional, user-centric web applications is what drives me. My recent work on projects like 'El Grano de Oro' allowed me to bridge the gap between complex backend logic and intuitive frontend design, utilizing JavaScript, HTML, and CSS to deliver a seamless e-commerce experience. I am particularly proud of integrating AI-driven features into live production environments, which has sharpened my ability to solve real-world problems efficiently. Beyond the code, I thrive in environments that demand quick adaptation and continuous learning, qualities I have cultivated while balancing my studies in Multiplatform Application Development and Industrial Engineering. My technical foundation in SQL and database management ensures that the applications I build are not only visually engaging but also robust and scalable. I am eager to bring this hands-on experience and my proactive mindset to the Junior Web Application Developer role at Randstad. I would welcome the opportunity to discuss how my background in full-stack development and my passion for automation can contribute to your team's success. Are you available for a brief conversation next week to explore how I can add value to your upcoming projects?

Atentamente,

Jorge Jaime Sena
