Notion

Software Engineer, Early Career (AI)

Building software that bridges the gap between complex logic and user-centric experiences is what drives me. My recent work on 'El Grano de Oro' demonstrates this perfectly: I developed a full-stack e-commerce platform that integrates Gemini AI to provide personalized product recommendations and automated customer support, proving that I can move beyond theoretical knowledge to deliver production-ready solutions. My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a rigorous approach to problem-solving and system architecture. Whether it is containerizing services with Docker or managing complex data flows, I thrive in environments that demand both technical precision and creative innovation. I am particularly drawn to the challenge of building intelligent, scalable tools that simplify workflows. I am eager to bring my hands-on experience with AI integration and full-stack development to your engineering team. I would welcome the opportunity to discuss how my technical background and passion for building impactful software align with the goals of your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
