Notion

Software Engineer, Early Career

Building software that solves real-world problems is what drives me, and I have spent the last few years turning that passion into production-ready applications. My technical foundation in JavaScript, Java, and C, combined with my experience using Docker and Git, has allowed me to build everything from full-stack e-commerce platforms to complex desktop utilities. I am particularly drawn to Notion's commitment to clean, efficient, and user-centric engineering, and I am eager to bring my hands-on experience with AI integration and database management to your team. Beyond my formal studies in Multiplatform Application Development and Industrial Engineering, I thrive on the autonomy of shipping projects from concept to deployment. Whether it is optimizing a SQL database or refining a frontend interface, I enjoy the challenge of creating tools that improve efficiency. I am confident that my proactive approach to problem-solving and my ability to adapt quickly to new tech stacks would make me a valuable addition to your engineering team. I would love to discuss how my background in building scalable applications aligns with the goals of your team at Notion. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
