Grupo Sevilla Control (GSC)

Técnico/a de Desarrollo - Software Developer

Building software that moves from concept to production is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and C. I thrive on solving complex technical challenges, whether it is optimizing database queries with SQL or containerizing services with Docker to ensure seamless deployment environments. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and system architecture. I am particularly drawn to Grupo Sevilla Control because of your commitment to technical excellence and innovation in software development. I am confident that my proficiency in JavaScript, Java, and Git, paired with my ability to quickly adapt to new technologies, will allow me to contribute effectively to your development team from day one. I would welcome the opportunity to discuss how my hands-on experience with real-world projects can support the goals of GSC. Are you available for a brief conversation next week to explore how my skills align with your current development needs?

Atentamente,

Jorge Jaime Sena
