Indra Group

JUNIOR SOFTWARE QUALITY ENGINEER. Sevilla

My passion for building robust software solutions, combined with my hands-on experience in full-stack development and AI integration, makes me a strong candidate for the Junior Software Quality Engineer position at Indra. Having developed and deployed production-ready applications like 'El Grano de Oro', I understand the critical importance of testing, performance optimization, and ensuring a seamless user experience from the ground up. My technical background in JavaScript, Java, and SQL, paired with my ability to automate workflows, aligns perfectly with the rigorous quality standards required in your engineering team. I am particularly drawn to this role because it allows me to apply my analytical mindset—honed through my Industrial Engineering studies—to identify potential bottlenecks and improve software reliability. I am eager to bring my proactive approach to problem-solving and my C1-level English proficiency to your international projects in Sevilla. I would welcome the opportunity to discuss how my technical skills and dedication to high-quality code can contribute to the success of Indra's upcoming initiatives. Are you available for a brief conversation next week to explore how I can add value to your QA team?

Atentamente,

Jorge Jaime Sena
