KITRO

Software Engineer

Building technology that drives sustainability is a challenge I am eager to tackle. My experience developing full-stack applications, such as my AI-integrated e-commerce platform, aligns closely with the mission at KITRO to transform data into actionable insights for food waste reduction. I am particularly drawn to your focus on scalable systems and the opportunity to contribute to a product that makes a tangible environmental impact.

In my recent projects, I have leveraged React and TypeScript to build intuitive user interfaces, while utilizing Python and PostgreSQL to manage backend logic and data processing. My background includes deploying applications to production environments, which has sharpened my ability to troubleshoot, optimize performance, and maintain high code quality. I am comfortable working with Git in collaborative workflows and am excited about the prospect of evolving your existing architecture alongside your engineering team.

Beyond my technical skills, I bring a proactive mindset and a C1 level of English, ensuring effective communication in international settings. I am highly motivated to apply my problem-solving skills to your data-intensive applications and contribute to a culture of continuous improvement. I would welcome the opportunity to discuss how my background in full-stack development and my passion for sustainable tech can support the KITRO mission. Please let me know when you might be available for a brief conversation.

Atentamente,

Jorge Jaime Sena
