Capgemini

Junior Full-Stack Developer

Building software that solves real-world problems is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my AI-integrated e-commerce platform, 'El Grano de Oro,' where I managed everything from the user interface to the backend database. I am eager to bring this hands-on experience to the Junior Full-Stack Developer role at Capgemini.

My technical foundation is built on JavaScript, Java, and SQL, complemented by a strong grasp of modern development workflows using Git and Docker. Whether I am architecting a desktop application for music management or deploying responsive web solutions, I prioritize clean code and scalable design. I thrive in environments that demand rapid adaptation and continuous learning, and my C1 English proficiency ensures I can collaborate effectively within your international teams.

I am particularly drawn to Capgemini's commitment to innovation and large-scale digital transformation. I am confident that my proactive approach to problem-solving and my ability to bridge the gap between complex backend logic and intuitive frontend design will make me a valuable asset to your development team. I would welcome the opportunity to discuss how my technical skills and passion for building functional software align with your current projects. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
