Fyst

Junior Technical Project Specialist

My background in building full-stack applications, combined with my hands-on experience in web development, makes me a strong candidate for the Junior Technical Project Specialist role. Having developed and deployed live projects like 'El Grano de Oro' and 'Catering SanMor,' I have gained a deep understanding of the entire web development lifecycle, from initial design in Figma to final deployment and maintenance. My technical foundation in HTML and CSS allows me to bridge the gap between design and development effectively, ensuring that requirements are clearly communicated and executed. Furthermore, I am highly proficient in leveraging AI tools to streamline operational workflows and research, a skill I have actively applied to integrate advanced features into my own software projects. I am eager to bring this proactive, problem-solving mindset to your team, helping to coordinate complex tasks and facilitate smooth communication between technical and non-technical stakeholders. I am confident that my ability to manage parallel projects and my technical curiosity will allow me to contribute immediately to your fintech operations. I would welcome the opportunity to discuss how my technical background and project management approach align with your team's goals. Are you available for a brief call next week to explore this further?

Atentamente,

Jorge Jaime Sena
