N26

Backend Engineer - Payments

Building high-volume, secure payment systems at N26 is exactly the kind of challenge that aligns with my passion for developing robust software. My background in Java and my proactive approach to building production-ready applications have prepared me to contribute effectively to your Payments Team. I am particularly drawn to your focus on seamless, reliable banking experiences and am eager to apply my skills in JVM-based development to your microservices architecture.

In my own projects, I have focused on creating scalable solutions, from full-stack web applications to automated desktop tools, always prioritizing clean code and functionality. I am highly motivated to transition my experience into a professional environment where I can leverage Spring Boot and Kotlin to build resilient systems. My familiarity with database management and cloud-based deployments, combined with a strong bias for action, ensures that I can hit the ground running and add value to your engineering team.

I am excited about the possibility of bringing my technical curiosity and commitment to quality to N26. I would welcome the opportunity to discuss how my background and my drive to solve complex problems can support your mission of reimagining digital banking. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
