EDICOM HR

Software Integrator con italiano

Building scalable software solutions that bridge the gap between complex data and user-friendly interfaces is what drives my professional development. My experience in full-stack development, combined with a strong foundation in Java and SQL, aligns perfectly with the technical requirements of the Software Integrator role at EDICOM. I have successfully deployed production-ready applications, such as e-commerce platforms integrated with AI-driven recommendation engines, which demonstrate my ability to handle end-to-end integration challenges effectively. Beyond my technical background, I am a proactive learner currently pursuing a degree in Industrial Engineering and a CFGS in Multiplatform Application Development. My ability to work in international environments is supported by my C1 English proficiency and my ongoing commitment to mastering new languages, including Italian. I am eager to bring my problem-solving mindset and my experience with tools like Docker and Git to your integration team. I would welcome the opportunity to discuss how my technical background and dedication to automation can contribute to the continued success of EDICOM's integration projects. Please let me know when you might be available for a brief conversation.

Atentamente,

Jorge Jaime Sena
