Guava Trees Softech Private Limited

Software Engineer (Fresher)

Building software that solves real-world problems is what drives me, and I have been following Guava Trees Softech's innovative approach to digital solutions with great interest. My background in full-stack development, combined with my hands-on experience in deploying production-ready applications, makes me a strong candidate for your Software Engineer position. In my recent project, 'El Grano de Oro,' I integrated AI-driven recommendation engines and virtual assistants using Gemini, demonstrating my ability to bridge the gap between complex backend logic and user-centric interfaces. Beyond web development, I have built robust desktop applications like 'Music Downloader Pro,' which showcases my proficiency in managing data synchronization and cross-platform architecture. My technical toolkit, including JavaScript, Java, and Docker, is complemented by a C1 English proficiency, allowing me to collaborate effectively in international environments. I am eager to bring my proactive mindset and technical versatility to your engineering team. I would welcome the opportunity to discuss how my passion for automation and scalable software can contribute to the continued success of Guava Trees Softech. Are you available for a brief call next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
