Nuvo

Software Engineer

Building software that bridges the gap between complex logic and user-centric design is what drives me every day. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations and virtual assistants—to creating robust desktop utilities like Music Downloader Pro. I thrive on solving technical challenges independently and am constantly pushing the boundaries of what I can build, whether it is optimizing database interactions or deploying scalable web solutions. My background in Industrial Engineering combined with my current focus on Multiplatform Application Development has equipped me with a unique analytical mindset. I am particularly drawn to Nuvo because of your commitment to high-quality engineering and innovation. I am confident that my proficiency in JavaScript, Java, and Docker, paired with my ability to integrate advanced AI models, will allow me to contribute effectively to your team from day one. I would love to discuss how my hands-on experience with production-ready applications aligns with the goals of your engineering department. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
