Software Engineer, Data Infrastructure & Acquisition - Seville, Spain

Building robust data pipelines and efficient acquisition systems is where I thrive. My experience developing full-stack applications, such as my AI-integrated e-commerce platform, has given me a deep understanding of how to manage data flow from acquisition to user-facing insights. I am particularly drawn to this role because it aligns perfectly with my technical background in SQL, Docker, and automated systems, which I have consistently applied to solve real-world problems in my own projects.

Beyond my technical skills, I bring a proactive mindset and a strong foundation in software engineering principles. Whether I am optimizing database queries or automating data synchronization tasks, I focus on creating scalable and maintainable infrastructure. My ability to bridge the gap between complex backend logic and functional applications allows me to contribute effectively to data-heavy environments from day one.

I am eager to bring my passion for data infrastructure and my C1-level English proficiency to your team in Seville. I would welcome the opportunity to discuss how my hands-on experience with automated data workflows can support your current objectives. Are you available for a brief conversation next week to explore how I can contribute to your engineering goals?

Atentamente,

Jorge Jaime Sena
