Oso

Software Engineer

Building software that solves real-world problems is what drives me, and my experience developing full-stack applications like 'El Grano de Oro' has prepared me to contribute effectively to the engineering team at Oso. By integrating AI models like Gemini into production-ready web platforms, I have honed my ability to bridge the gap between complex technical requirements and intuitive user experiences. My background in both Industrial Engineering and Multiplatform Application Development allows me to approach software architecture with a unique, analytical perspective. Whether I am optimizing database queries, managing deployments with Docker, or crafting responsive interfaces, I focus on delivering clean, scalable, and efficient code. I am particularly drawn to Oso's commitment to innovation and would love to bring my technical versatility and proactive problem-solving mindset to your current projects. I am confident that my hands-on experience with JavaScript, Java, and SQL, combined with my C1 English proficiency, will allow me to integrate seamlessly into your international team. I would welcome the opportunity to discuss how my background and passion for AI-driven development align with the goals of your engineering department. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
