SOLTEL Group

Programador/a de aplicaciones-automatizaciones-IA

Building scalable software that bridges the gap between complex business needs and intelligent automation is what drives my development process. Having successfully deployed projects like 'El Grano de Oro', where I integrated Gemini-based AI assistants to provide personalized customer experiences, I am eager to bring this hands-on expertise to the team at SOLTEL Group. My background in full-stack development, combined with a passion for creating automated workflows, allows me to transform technical requirements into robust, production-ready applications.

Beyond my technical proficiency in JavaScript, Java, and Docker, I pride myself on my ability to learn rapidly and work independently. Whether it is developing desktop tools for automated music management or building professional web platforms, I focus on delivering clean, efficient code that solves real-world problems. My academic foundation in Industrial Engineering and Multiplatform Application Development provides me with a unique analytical perspective that I apply to every line of code I write.

I am confident that my proactive approach to AI integration and software development aligns perfectly with the innovative projects at SOLTEL Group. I would welcome the opportunity to discuss how my technical skills and dedication to automation can contribute to your upcoming initiatives. Are you available for a brief conversation next week to explore how I can add value to your development team?

Atentamente,

Jorge Jaime Sena
