Bending Spoons

Graduate software engineer

Building software that bridges the gap between complex logic and user-centric design has been my primary focus throughout my academic journey and personal projects. Having developed full-stack applications like 'El Grano de Oro', I have gained hands-on experience in orchestrating JavaScript and SQL to deliver seamless, production-ready solutions. My technical foundation, built on Java, C, and containerization with Docker, allows me to approach engineering challenges with both precision and scalability in mind. I am particularly drawn to Bending Spoons because of your commitment to high-impact, innovative products that push the boundaries of what software can achieve. My background in Industrial Engineering, combined with my passion for AI integration, has equipped me with a unique analytical mindset that I am eager to apply to your development team. I am confident that my ability to rapidly master new technologies and my proactive approach to problem-solving align perfectly with the fast-paced environment at Bending Spoons. I would welcome the opportunity to discuss how my technical skills and drive for excellence can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your engineering team?

Atentamente,

Jorge Jaime Sena
