Bracari

Junior Software Developer

Building software that moves from concept to production is what drives me. My experience developing full-stack solutions, such as my e-commerce platform 'El Grano de Oro', has allowed me to master the integration of AI models like Gemini with robust web architectures. I am particularly drawn to the Junior Software Developer role at Bracari because of your commitment to innovative tech solutions, and I am confident that my hands-on approach with JavaScript, Java, and Docker will allow me to contribute effectively to your team from day one. Beyond my technical skills, I bring a proactive mindset and the ability to bridge the gap between complex backend logic and user-centric interfaces. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has sharpened my problem-solving capabilities and my capacity to adapt to new environments quickly. I am eager to bring my passion for automation and clean code to Bracari. I would welcome the opportunity to discuss how my projects and technical background align with your current development goals. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
