Flight Agencies

Junior Software Engineer

Building software that solves real-world problems is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro'—where I integrated AI-driven recommendations and virtual assistants—to creating robust desktop tools like Music Downloader Pro. These projects have allowed me to master the full development lifecycle, ensuring that every line of code serves a functional purpose for the end user. My technical foundation in JavaScript, Java, and SQL, combined with my ability to containerize applications using Docker, aligns perfectly with the engineering standards at Flight Agencies. I thrive in environments that demand rapid adaptation and independent problem-solving, and I am eager to bring this proactive mindset to your development team. Beyond my technical skills, my C1 English proficiency ensures I can collaborate effectively in international settings and engage deeply with complex documentation. I am genuinely excited about the possibility of contributing to your upcoming projects and would welcome the opportunity to discuss how my background in full-stack development and AI integration can add immediate value to your team. Are you available for a brief call next week to explore how I can support your engineering goals?

Atentamente,

Jorge Jaime Sena
