Elevenlabs

Martech Engineer

ElevenLabs is setting the standard for AI-driven experiences, and I am eager to contribute to that mission by optimizing your measurement infrastructure. As a developer who thrives on building end-to-end solutions—from frontend interfaces to backend data flows—I am confident in my ability to manage your tag architecture and ensure the precision of your paid acquisition data.

My technical background in JavaScript and TypeScript, combined with my experience in deploying production-ready web applications using Next.js, aligns perfectly with the requirements of this role. I have a proven track record of building tools that require high reliability and performance, and I am ready to apply this rigor to your server-side GTM setup, Meta CAPI, and Google Enhanced Conversions. I understand that tracking is not just about implementation; it is about maintaining data integrity without compromising Core Web Vitals or user experience.

I am particularly drawn to the high-velocity, impact-focused culture at ElevenLabs. I am comfortable debugging complex attribution discrepancies and building the monitoring systems necessary to catch issues before they impact business decisions. I would welcome the opportunity to discuss how my technical skills and proactive approach to problem-solving can help ElevenLabs scale its marketing engineering efforts effectively. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
