Talan

React Front-End Developer (4 months contract)

The opportunity to contribute to Talan's innovative projects as a React Frontend Developer is exactly the kind of challenge I am looking for. With a strong foundation in building scalable web applications and a passion for modern development, I am confident that my technical background aligns perfectly with your requirements for this four-month engagement. In my recent projects, such as 'El Grano de Oro,' I have leveraged React and Next.js to build high-performance, user-centric interfaces. I am comfortable working with TypeScript to ensure type safety and maintainability, and I have extensive experience integrating RESTful APIs to connect front-end components with robust backend services. Beyond the UI, I bring a practical understanding of Python and SQL, along with experience in cloud environments, which allows me to collaborate effectively across the full development lifecycle. I am particularly drawn to Talan's commitment to digital transformation and high-impact solutions. My ability to adapt quickly, combined with my C1 English proficiency, ensures that I can integrate seamlessly into your international team and contribute to your CI/CD and deployment standards from day one. I am eager to bring my proactive approach and technical skills to your upcoming projects. I would welcome the chance to discuss how my experience with React and cloud-integrated architectures can support Talan's goals. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
