Carto

QA Engineer

I have been following CARTO's impact on spatial analytics, and I am excited about the opportunity to contribute to your engineering team as a Software Engineer in Test. My background in building full-stack applications, combined with my hands-on experience integrating AI models like Gemini into production environments, aligns perfectly with your focus on agentic test generation and AI-driven quality tooling. I am not just a developer; I am a builder who enjoys creating tools that solve real-world problems, whether it is automating music library management or deploying AI-powered e-commerce platforms. My daily workflow heavily relies on AI coding assistants, and I have developed a keen eye for identifying where these tools excel and where they require human oversight to ensure robust, reliable code. I am comfortable working with TypeScript and JavaScript, and I have a strong foundation in SQL, which I am eager to apply to validate complex data flows within your platform. I thrive in autonomous environments where I can propose new testing strategies rather than simply following a playbook. I am confident that my technical curiosity and my ability to bridge the gap between development and quality assurance would make me a valuable asset to the CARTO team. I would welcome the chance to discuss how my experience with automation and AI can help maintain the high standards of your location intelligence platform. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
