Bending Spoons

Graduate software engineer

Building software that solves real-world problems is what drives me, and I have followed Bending Spoons' impact on the tech landscape with great admiration. My background in both Industrial Engineering and Software Development has equipped me with a unique blend of analytical rigor and hands-on technical proficiency, which I am eager to apply to your engineering team. Throughout my projects, such as developing a full-stack e-commerce platform with AI integration, I have relied heavily on JavaScript, Java, and SQL to build scalable, user-centric solutions. I am comfortable working across the entire development lifecycle, from architecting databases to containerizing applications with Docker for seamless deployment. Beyond these core technologies, my experience with C and Git has instilled in me a deep respect for clean, efficient code and collaborative version control. I thrive in environments that demand rapid adaptation and creative problem-solving, and I am confident that my proactive approach to learning will allow me to contribute meaningfully to your upcoming projects. I would welcome the opportunity to discuss how my technical skills and passion for building high-quality software align with the goals of your team. Are you available for a brief conversation next week to explore how I can add value to Bending Spoons?

Atentamente,

Jorge Jaime Sena
