Microsoft

Software Engineer

Building software that solves real-world problems is what drives me every day. My experience spans from developing full-stack web applications like 'El Grano de Oro'—where I integrated AI-driven recommendation engines and virtual assistants—to creating robust desktop tools like Music Downloader Pro. These projects have allowed me to master the end-to-end development lifecycle, ensuring that both the user interface and the backend architecture are optimized for performance and scalability. Beyond my technical projects, my background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a rigorous approach to problem-solving and system design. I am particularly drawn to Microsoft's commitment to innovation in AI and cloud technologies, and I am eager to contribute my skills in JavaScript, Java, and Docker to your engineering team. My ability to work in international environments, supported by my C1 English proficiency, ensures I can collaborate effectively with global teams from day one. I am confident that my proactive mindset and hands-on experience with production-ready applications make me a strong fit for your team. I would welcome the opportunity to discuss how my technical background and passion for building scalable software can contribute to Microsoft's ongoing success. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
