Software Developer Java, Python, AWS, Terraform | 100% Teletrabajo

Building scalable software solutions is what drives me, and I have spent the last few years bridging the gap between academic engineering principles and real-world production environments. My experience developing full-stack applications, combined with a strong foundation in Java and a proactive approach to learning new ecosystems, makes me a great fit for your team. I am particularly drawn to this role because it aligns perfectly with my current focus on cloud infrastructure and backend automation.

While my background includes diverse projects like AI-integrated web platforms and desktop automation tools, I am eager to apply my skills in Java and Python to your cloud-native initiatives. I am already familiar with containerization through Docker and am highly motivated to deepen my expertise in AWS and Terraform to streamline deployment pipelines. My ability to solve complex problems independently, paired with my C1 English proficiency, ensures I can contribute effectively to your international development goals from day one.

I am confident that my technical curiosity and hands-on experience will bring immediate value to your projects. I would welcome the opportunity to discuss how my background in software architecture and my commitment to clean, efficient code can support your team's success. Are you available for a brief conversation next week to explore how I can contribute to your upcoming sprints?

Atentamente,

Jorge Jaime Sena
