Scotiabank

Junior Software Engineer

Building software that solves real-world problems is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my e-commerce platform featuring AI-driven recommendations and a custom virtual assistant. I thrive on the challenge of bridging the gap between complex backend logic and intuitive user interfaces, ensuring that every line of code serves a clear purpose. My technical foundation is built on JavaScript and Java, complemented by a disciplined approach to version control with Git and containerization using Docker. I am particularly drawn to Scotiabank's commitment to innovation and digital transformation, as I am eager to apply my skills in SQL database management and full-stack development to contribute to your engineering team. Beyond my formal studies in Multiplatform Application Development and Industrial Engineering, I have cultivated a proactive mindset that allows me to adapt quickly to new technologies and collaborate effectively in international environments, supported by my C1 English proficiency. I am confident that my hands-on experience in deploying scalable applications aligns perfectly with the goals of your team. I would welcome the opportunity to discuss how my background and passion for efficient, high-quality software can support your upcoming projects. Are you available for a brief conversation next week to explore how I can contribute to Scotiabank?

Atentamente,

Jorge Jaime Sena
