Cirium

Junior Software Engineer

Building software that solves real-world problems is what drives me, and my recent work on projects like 'El Grano de Oro' reflects my commitment to creating functional, user-centric applications. By integrating AI models like Gemini into production-ready web platforms, I have developed a strong foundation in full-stack development, database management, and automated workflows. My technical toolkit, which includes JavaScript, Java, and Docker, allows me to bridge the gap between complex backend logic and intuitive user interfaces effectively. Beyond my formal studies in Multiplatform Application Development and Industrial Engineering, I thrive on the autonomy of building and deploying my own tools, such as my music management desktop application. I am particularly drawn to Cirium because of your reputation for handling complex data and high-impact software solutions. I am confident that my proactive approach to problem-solving and my ability to adapt to new technologies will allow me to contribute meaningfully to your engineering team from day one. I would welcome the opportunity to discuss how my technical background and passion for innovation align with the goals of your team. Are you available for a brief conversation next week to explore how I can support your current projects?

Atentamente,

Jorge Jaime Sena
