Flight Agencies

Junior Software Engineer

Building software that bridges the gap between complex logic and user-centric design is what drives me. My experience developing full-stack applications, such as my e-commerce platform 'El Grano de Oro', has allowed me to master the integration of AI models like Gemini into real-world production environments. I thrive on solving technical challenges, whether it is optimizing database queries or creating seamless desktop tools like my Music Downloader Pro, which features automated synchronization and cross-platform connectivity. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and system architecture. I am particularly drawn to Flight Agencies because of your commitment to innovation and high-performance software solutions. I am confident that my proficiency in JavaScript, Java, and Docker, paired with my ability to work effectively in international environments with my C1 English, will allow me to contribute immediately to your engineering team. I would love to discuss how my hands-on experience with full-stack development and AI integration can support the goals of your team. Are you available for a brief conversation next week to explore how I can add value to Flight Agencies?

Atentamente,

Jorge Jaime Sena
