Intuit

Full Stack Software Developer I

My passion for building end-to-end software solutions has driven me to develop production-ready applications that bridge the gap between complex backend logic and intuitive user interfaces. With a strong foundation in JavaScript and Java, I have successfully deployed projects like 'El Grano de Oro,' where I integrated AI-driven features and robust database management to create a seamless e-commerce experience. My technical toolkit, which includes SQL for data handling and Docker for containerization, allows me to maintain high standards of efficiency and scalability in every project I undertake. I am particularly drawn to this role at Intuit because of your commitment to innovation and high-impact software. Beyond my technical skills, my background in Industrial Engineering and my C1 English proficiency enable me to approach problem-solving with a structured, analytical mindset while collaborating effectively in international environments. I am eager to bring my hands-on experience with Git workflows and full-stack development to your team. I would welcome the opportunity to discuss how my proactive approach to software development can contribute to the continued success of your engineering team. Are you available for a brief conversation next week to explore how my skills align with your current goals?

Atentamente,

Jorge Jaime Sena
