Revel

Full Stack Software Engineer (Entry-Junior)

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My background in Industrial Engineering and current focus on Multiplatform Application Development have provided me with a rigorous analytical mindset, which I apply daily to my full-stack projects. I have successfully deployed production-ready applications using JavaScript and Java, ensuring robust backend performance and seamless frontend experiences. My experience with SQL for database management and Docker for containerization has allowed me to streamline deployment workflows, a skill set I am eager to bring to the engineering team at Revel. Beyond the code, I thrive on solving real-world problems, such as integrating AI-driven assistants into e-commerce platforms to enhance user engagement. I am particularly drawn to Revel because of your commitment to innovative software solutions, and I am confident that my proactive approach to development and my ability to learn new technologies rapidly will allow me to contribute effectively from day one. I would welcome the opportunity to discuss how my technical background and passion for building scalable applications align with your current goals. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
