Baton Corporation

Junior Full Stack Engineer (\$250k - \$300k salary)

Building software that solves real-world problems is what drives me, and I have followed Baton Corporation's recent innovations with great interest. My background in developing full-stack applications, combined with my hands-on experience in deploying production-ready projects, aligns perfectly with the technical challenges your team tackles daily. I am eager to bring my proactive approach to your engineering department. Throughout my recent projects, I have leveraged JavaScript and Java to build scalable solutions, while utilizing Docker to streamline deployment workflows and Git for efficient version control. Whether it is designing intuitive interfaces with HTML/CSS or managing complex data structures with SQL, I focus on writing clean, maintainable code that delivers tangible value. My experience integrating AI models into web applications has further sharpened my ability to implement modern, high-impact features. I am confident that my technical versatility and commitment to continuous learning will allow me to contribute effectively to Baton Corporation from day one. I would welcome the opportunity to discuss how my skills in full-stack development and my passion for automation can support your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
