Deloitte

Full Stack Developer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience spans from developing full-stack web applications to deploying desktop tools, always focusing on clean code and efficient architecture. By leveraging JavaScript, Java, and SQL, I have successfully launched production-ready projects, including an AI-integrated e-commerce platform that handles automated notifications and multilingual support. My technical foundation is further strengthened by my proficiency in Git and Docker, ensuring that my development workflow is both scalable and collaborative. I am particularly drawn to the innovative environment at Deloitte, where I am eager to apply my problem-solving skills to high-impact projects. My background in Industrial Engineering, combined with my hands-on development experience, allows me to approach technical challenges with a unique, analytical perspective. I am confident that my ability to adapt quickly and my passion for continuous learning will make me a valuable asset to your development team. I would welcome the opportunity to discuss how my technical background and project experience align with the goals of your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming initiatives?

Atentamente,

Jorge Jaime Sena
