Clark

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Clark's commitment to simplifying insurance through technology with great interest. My background in full-stack development, combined with a hands-on approach to deploying production-ready applications, aligns perfectly with the challenges your engineering team tackles daily. In my recent project, 'El Grano de Oro,' I integrated AI models like Gemini to create personalized recommendation engines and automated customer support, demonstrating my ability to bridge the gap between complex backend logic and seamless user experiences. Beyond web development, I have built robust desktop tools using Java and JavaScript, always focusing on clean architecture and efficient deployment workflows. My experience with Docker and Git ensures that I can contribute to your development lifecycle from day one, while my C1 English proficiency allows me to collaborate effectively in international environments. I am eager to bring my passion for automation and my proactive problem-solving mindset to the Junior Software Engineer role at Clark. I would welcome the opportunity to discuss how my technical skills and my experience in building scalable, user-centric applications can contribute to your team's success. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
