Gemba Advantage

Software Engineer

Building software that solves real-world problems is what drives me. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to bridge the gap between complex backend logic and intuitive user interfaces. By integrating AI models like Gemini into production environments, I have learned how to leverage emerging technologies to create tangible value for users, a mindset I am eager to bring to the engineering team at Gemba Advantage. My technical foundation, spanning JavaScript, Java, and Docker, is complemented by a proactive approach to problem-solving. Whether I am architecting a desktop application for music management or deploying responsive web solutions, I prioritize clean code and scalability. I am particularly drawn to Gemba Advantage because of your commitment to high-quality engineering and innovation. With a C1 level of English and a background in Industrial Engineering, I thrive in collaborative, international environments where technical precision is paramount. I would welcome the opportunity to discuss how my hands-on experience and passion for full-stack development can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
