MixRank

Junior Software Engineer — Remote, Argentina

Building software that bridges the gap between complex logic and user-centric design is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to deploy full-stack solutions, specifically integrating AI models like Gemini to enhance user experience through personalized recommendations and automated support. I thrive on turning technical challenges into functional, production-ready applications, whether it is a web platform or a desktop utility like my Music Downloader Pro. My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a rigorous approach to problem-solving and system architecture. I am particularly drawn to MixRank because of your focus on data-driven innovation and scalable technology. I am confident that my proficiency in JavaScript, Java, and Docker, paired with my C1 English fluency, will allow me to contribute effectively to your remote engineering team from day one. I would welcome the opportunity to discuss how my hands-on experience with AI integration and full-stack development aligns with the goals of your engineering department. Are you available for a brief call next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
