Rokt

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Rokt's innovative approach to transaction moments with great interest. My background in developing full-stack applications, combined with a strong foundation in Java, JavaScript, and C, has allowed me to deploy projects like 'El Grano de Oro,' where I integrated AI assistants to enhance user experience. I thrive in environments that demand both technical rigor and creative problem-solving.

Throughout my academic journey in Industrial Engineering and Software Development, I have focused on mastering the tools that power modern infrastructure. I am highly proficient in using Docker for containerization and Git for version control, ensuring that my code is not only functional but also scalable and maintainable. My experience building desktop applications and web platforms has taught me how to bridge the gap between complex backend logic and intuitive user interfaces.

I am eager to bring my technical versatility and my proactive mindset to the engineering team at Rokt. I am confident that my ability to learn quickly and my passion for automation will allow me to contribute effectively to your ongoing projects. I would welcome the opportunity to discuss how my skills align with your current goals. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
