Carra

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Carra's recent growth with great interest. My approach to development goes beyond just writing code; I focus on creating end-to-end solutions, from intuitive user interfaces to robust database management. In my recent project, 'El Grano de Oro,' I successfully integrated AI models like Gemini to provide personalized product recommendations and automated customer support, demonstrating my ability to implement modern technology in production-ready environments. My technical foundation in JavaScript, Java, and SQL, combined with my experience using Docker for containerization, allows me to adapt quickly to diverse development workflows. I am particularly drawn to the Junior Software Engineer role at Carra because of your commitment to innovation and high-quality engineering standards. I am confident that my proactive mindset and hands-on experience with full-stack development will allow me to contribute effectively to your team from day one. I would welcome the opportunity to discuss how my technical skills and passion for automation can support Carra's upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your engineering department?

Atentamente,

Jorge Jaime Sena
