## Sopra Steria

Software Engineer (Java/React)

Building robust software is more than just writing code; it is about solving real-world problems through clean architecture and intuitive interfaces. My background in Java and React, combined with my experience deploying full-stack applications, aligns perfectly with the technical challenges at Sopra Steria. I have spent the last few years bridging the gap between complex backend logic and seamless user experiences, ensuring that every project I touch is scalable and production-ready. My recent work, such as developing an AI-integrated e-commerce platform, has sharpened my ability to manage end-to-end development cycles. I am particularly drawn to this role because of your commitment to high-impact engineering, and I am eager to bring my technical versatility and proactive problem-solving mindset to your team. I am confident that my hands-on experience with Java and React will allow me to contribute effectively to your ongoing projects from day one. I would welcome the opportunity to discuss how my skills can support your team's goals. Are you available for a brief conversation next week to explore how I can add value to Sopra Steria?

Atentamente,

**Jorge Jaime Sena**
